MARK JOHNSON

Vermont State Lead

802-505-1037 | mjohnson@rcapsolutions.org

Mr. Johnson joined RCAP Solutions in October of 2015 with 15 years of experience in the drinking water industry. Working for an environmental engineering firm on drinking water and stormwater projects while at Northeastern University, he was exposed to a range of water-related issues from water treatment to sustainable water system operation and source water protection. After graduation, he worked for a small water utility on the coast of Maine as the lead operator for a surface water treatment plant and distribution system. During that time, he experienced many of the challenges associated with operating a small water system and became a resource for the community on water-related issues. He left Maine to become a Water Quality Engineer at a large investor-owned water utility in California. There he ensured compliance with state and federal environmental regulations and worked on water quality issues for large and small systems all over the state.

Expertise:

Mark is currently working with rural Vermont communities on critical water and wastewater issues, with the goal of strengthening local skills and capabilities in the areas of needs assessment, planning, finance, operation and maintenance, project development, education, and administration. Mark works closely with partners at USDA Rural Development and at the Department of Environmental Conservation, where he serves on water and wastewater committees. Mark has been certified as a water operator in Maine (T4/D4), California (T3/D3), and Vermont (Class 3).

Education:

B.S. Civil and Environmental Engineering, minor Environmental Geology - Northeastern University

Professional Certifications:

Cross-Connection Control Program Specialist - AWWA

Backflow Prevention Assembly Tester - AWWA

Certified Water Operator, Vermont (Class 3)
